

SLOW-SINKING EXTRUDED MICROPPELLETS AND PELLETS FOR CHAR FRY

Slow-sinking extruded micropellets and pellets for the growth and pre-fattening of fry. The extremely high biological value of the protein and a moderate lipid level, combined with targeted inclusions of immunostimulants and functional products for liver and intestinal health, make this feed line unique, ensuring both harmonious and healthy growth and strengthening the immune system of char during the early growth stages.
